

# Baseball League Project

## MVC Pair Project

---

### Requirements:

You will create an MVC site using a SQL Server database backend that allows you to manage a baseball league.

1. Allow the user to create new teams
2. Allow the user to create new players
3. Allow the user to associate players with teams (player can only be associated with one team at a time)
4. Allow the user to list all the teams in the league
5. Allow the user to list all players on a team
6. Allow the user to trade a player from one team to another
7. Allow the user to delete a player

Information to track:

League:

- League Name
- List of teams in League

Team:

- Team Name
- Manager
- List of Players on Team

Player

- Player Name
- Jersey Number

# Baseball League Project

## MVC Pair Project

- 
- Position Played
  - Previous Years Batting Average (if available)
  - Number of years played

### Extra Challenges:

1. Add the ability to create and display a schedule of games so that each team plays every other team at least once but not more than three times.
2. Add the ability to track game results.
